

Strategy to Principles

You want to make sure your architecture evolves in line with business strategy?

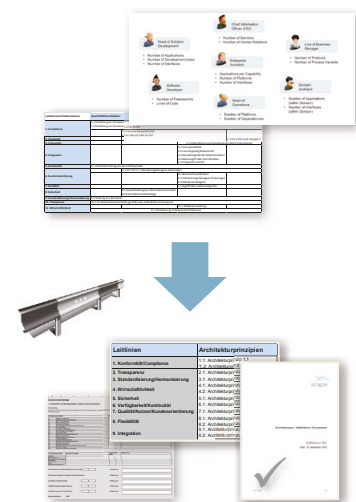

- You would like to see your enterprise architecture evolve in alignment with business strategy and meet high quality standards?
- You are looking for a solution to bridge the gap between abstract enterprise and IT strategy on the one hand and operational projects on the other?
- You are in need of „guard rails“ to guide solution projects in a reliable way?

Utilize our „Strategy to Principles“ service

We support you in developing the required instruments by defining architecture principles as well as the necessary tools to assess architecture conformity and quality on the operational level. To this end, we provide a complete practice-proven approach including a catalogue of guidelines, a set of architectural principles with corresponding assessment and quality criteria as well as templates to be used within architecture checks.

Our approach in detail

- Choose an overall approach that fits your organization
- Analyze your stakeholders, strategy, and the environment
- Derive goals and guidelines based on a generic catalogue
- Define suitable architecture principles, measures to assess principle conformity as well as acceptable boundaries
- Define criteria for evaluating architecture quality
- Taylor our generic templates for architecture checks to meet your specific needs
- Test your newly developed instruments during a trial run
- Optional: implement the approach within your entire organization (communication, coaching, etc.)

Your benefit

- Benefit from the experience of our consultants and our practice-proven assets
- Build the bridge between strategy and projects and hence increase the effectiveness of EA
- Make a measurable contribution to the increase of architecture conformity and quality in partnership with projects, and thus increase the acceptance of EA
